

Trần Cao Duy Trường

Flutter Developer

Ho Chi Minh City, Vietnam · +84 367 243 065 · duytruong8a1@gmail.com

SUMMARY

Flutter developer based in Ho Chi Minh City with 5 years of Flutter experience for iOS and Android. Builds high-quality cross-platform apps with reusable widget architecture, BLoC/Riverpod state management, and strong UX performance. Partners with UI/UX and backend teams to ship production features from wireframes through REST API integration (JWT/OAuth). Experienced in healthcare, logistics, e-commerce, real-time communication, and AI-enabled mobile workflows. Comfortable in Agile/Scrum, Git Flow, FVM, flutter_test, platform channels, and Google Play / App Store releases.

SKILLS

Flutter: 5+ years, widget lifecycle, responsive layouts, reusable UI architecture, performance tuning

Dart: null safety, async/await, streams, generics, clean architecture and modular feature structure

State management: BLoC, Riverpod, Provider; aligned with SDLC and maintainable production code

APIs: RESTful services, JSON serialization (json_serializable), HTTP error handling, JWT/OAuth flows

Native integration: platform channels, flutter_webrtc, Firebase, maps SDKs, push (FCM), local notifications

Engineering: Git Flow (branch/PR/rebase), FVM, code reviews, Google Play and App Store release

Testing: flutter_test, widget/integration tests, mockito; CI-friendly quality gates

Delivery: Agile/Scrum, cross-functional collaboration, English communication; AI feature integration

EXPERIENCE

UTGL — Flutter Developer · 2025–2026

- Built and maintained cross-platform Flutter features for production mobile products.
- Integrated REST APIs and partnered with UI/UX and backend teams to ship production-ready releases.
- Participated in Agile delivery, code reviews, and iterative improvements to app performance and UX.
- <https://www.utgl.net/>

Develop.Software LLC — Flutter Developer · 2024–2025

- Built and optimized cross-platform Flutter apps; designed reusable widgets for client products.
- Partnered with designers and backend engineers to deliver API-driven, production-ready features.
- Applied licensed/open-source pub packages strategically to accelerate delivery without sacrificing quality.
- Site: <https://www.develop.software/>

BringHacks — Part-time Flutter Engineer · 2023–2024

- Shipped Flutter consumer app features with iterative Agile delivery and store releases.
- Integrated REST/Firebase APIs, fixed defects, and improved UX through widget-level refinements.

Beings — Flutter Engineer (calling / streaming) · 2023–2024

- Developed real-time communication UI with platform-channel integration for WebRTC/streaming modules.
- Configured iOS/Android native build settings and flutter_webrtc packaging for stable call delivery.

- Contributed to architecture discussions, reliability fixes, and cross-team coordination in English.

Medpro — Flutter Developer · 2020–2023

- Owned Flutter healthcare apps end-to-end: booking flows, medical workflows, and accessibility-focused UX.
- Stack: Dart, BLoC/Riverpod, REST APIs, JWT-style auth, Firebase, FCM push, and release pipelines.
- Published and maintained Google Play and App Store releases for BV Mắt, UMC, and UMC2.

SELECTED PROJECTS

Medpro apps (BV Mắt / UMC / UMC2)

- Description: Healthcare booking apps for hospitals and clinics
- Role: Flutter Developer
- Built cross-platform screens with Dart and BLoC; designed reusable booking/medical widget libraries
- Integrated REST APIs (JWT auth), Firebase, FCM push, and release automation; owned Google Play and App Store releases

Olivia

- Description: AI-powered 3D conversation and chat/video mobile product
- Role: Flutter Developer
- Architected Flutter UI for 3D avatar sessions, chat/video flows, and layered navigation with performance-focused widgets
- Built reusable presentation layers (media controls, conversation states) with Riverpod/BLoC and clean architecture
- Integrated OpenAI/LLM pipelines, prompt-driven responses, and REST/WebSocket event handling for live sessions
- Implemented audio/video capture flows, connection-state UX, and error recovery for low-latency interactions
- Optimized build size, memory usage, and frame stability on mid-range devices; collaborated with backend on API contracts
- Demo: <https://www.youtube.com/watch?v=9GeXwjusInQ>

Beam

- Description: Real-time voice and video calling platform
- Role: Flutter Engineer
- Developed production calling UI: dial/join flows, in-call controls, network indicators, and screen-share oriented experiences
- Integrated flutter_webrtc via platform channels; customized iOS/Android native build and plugin packaging
- Resolved cross-platform issues (permissions, background audio, device routing) to improve call setup and session stability
- Connected REST/streaming/signaling services; aligned Flutter events with backend session lifecycle and reconnection logic
- Profiled and fixed production defects (latency spikes, dropped tracks, UI desync); partnered with backend on reliability

PakyawKalabaw (Philippines)

- Description: Logistics app for contractors and clients: transportation, food shipping, and related services
- Role: Flutter Developer; C# Backend Developer; ReactJS Web Admin Developer
- Flutter: built contractor/client mobile flows (jobs, transport, food shipping); Google Maps and licensed SDK integration; Play Store release
- C# backend: designed and maintained REST APIs, business logic, auth, and data models for orders, tracking, and user roles
- ReactJS admin: developed web dashboard for dispatch, user/order management, and operational

monitoring tied to backend APIs

- Owned cross-stack delivery: API contracts, error handling, performance fixes, and production support across mobile, API, and admin
- <https://play.google.com/store/apps/details?id=com.developsoftware.pakyawkalabaw>
- <https://pakyawkalabaw.com/>

BringHacks (Tips & Quotes)

- Description: Consumer tips and quotes app (Flutter)
- Role: Part-time Flutter Engineer
- Shipped Flutter mobile features end-to-end; integrated Firebase/REST APIs and BLoC/Riverpod state management
- Supported React admin companion flows for content management and production data operations

HLMart (Vietnam)

- Description: E-commerce mobile app for catalog browsing and online orders
- Role: Flutter Developer
- Built catalog, cart, and order flows in Dart with reusable product/checkout widgets and go_router navigation
- Integrated WooCommerce REST APIs for catalog, pricing, and order status; handled API auth and edge-case fixes
- <https://hlmart.vn/>

EDUCATION

Ho Chi Minh City University of Technology (HCMUT) — Graduate
GPA 3.3/4.0 (8.0/10) · OISP Scholarship, Bach Khoa University

OTHER

IELTS 6.5 (2019–2021) · 2nd place, Minathon 2023 (ATWARE)
Working location: Ho Chi Minh City · Date of birth: 12 October 2002
